

$$a^3 + b^3 = (a+b)(a^2 - ab + b^2)$$

$$(a+b)(a-b) = a^2 - b^2$$

$$(a+b)^2 = a^2 + 2ab + b^2$$

$$ax^2 + bx + c = 0$$

$$4a^2x^2 + 4abx + 4ac = 0$$

$$4a^2x^2 + 4abx = -4ac$$

$$4a^2x^2 + 4abx + b^2 = b^2 - 4ac$$

$$(2ax + b)^2 = b^2 - 4ac$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

QUADRATIC EQUATIONS

Part - 3

Solution of a Quadratic Equation by Factorisation

Shubham Tiwari

OVERVIEW

1. Quadratic Equations

2. Solution of a Quadratic Equation by Factorisation

3. Nature of Roots

$$(a+b)(a-b)=a^2-b^2$$

$$(a+b)^2=a^2+2ab+b^2$$

$$ax^2+bx+c=0$$

$$4a^2x^2+4abx+4ac=0$$

$$4a^2x^2+4abx=-4ac$$

$$4a^2x^2+4abx+b^2=b^2-4ac$$

$$(2ax+b)^2=b^2-4ac$$

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

ROOTS OF A QUADRATIC EQUATION

We say that $x = \alpha$ (where α is a real number) is a solution of quadratic equation $ax^2 + bx + c = 0$, $a \neq 0$, if $a(\alpha)^2 + b(\alpha) + c = 0$

mq

$$x^2 + \underbrace{5x + 6}_{(6)} = 0$$

$$x^2 + 3x + 2x + 6 = 0$$

$$\underbrace{x(x+3) + 2(x+3)} = 0$$

$$\underbrace{(x+3)} \underbrace{(x+2)} = 0$$

$$x+3=0 \quad | \quad x+2=0$$

$$x = -3 \quad | \quad \underline{x = -2}$$

$$\begin{array}{r} 4 - 10 + 6 \\ 10 - 10 = 0 \\ \hline 9 - 15 + 6 \\ 15 - 15 = 0 \end{array}$$

$$a \times b = 0$$

$$0 \times b = 0$$

$$a \times 0 = 0$$

mg

- ▮ A quadratic equation has two and only two roots.
- ▮ A quadratic equation can not have more than two different roots.

- If α and β are the roots of $ax^2 + bx + c = 0$ then we say that $x = \alpha, \beta$ satisfies the equation $ax^2 + bx + c = 0$ or $x = \alpha, \beta$ are solution of the equation $ax^2 + bx + c = 0$.

- If α be a root of the quadratic equation $ax^2 + bx + c = 0$ then $(x - \alpha)$ is a factor of corresponding quadratic expression $ax^2 + bx + c$.

$$x^2 + 5x + 6 = 0$$

$$\frac{(x+2)(x+3)}{x = -2 \quad | \quad x = -3}$$

$$\frac{(x - (-2))}{(x+2)}$$

FACTORISATION METHOD

$x^2 + 5x + 6 = 0$

mg

$(x+2)(x+3)$

$x = -2 \mid x = -3$

Example : 3

Find the roots of the equation

$$2x^2 - 5x + 3 = 0, \text{ by factorisation.}$$

$$2x - 3 = 0$$

$$2x = 3$$

$$\boxed{x = \frac{3}{2}}$$

$$x - 1 = 0$$

$$\boxed{x = 1}$$

Solu

$$2x^2 - 5x + 3 = 0$$

$$2x^2 - 3x - 2x + 3 = 0$$

$$x[2x - 3] - 1[2x - 3] = 0$$

$$(2x - 3)(x - 1) = 0$$

Example : 4

Find the roots of the quadratic equation $6x^2 - x - 2 = 0$.

$$3x - 2 = 0 \quad | \quad 2x + 1 = 0$$

$$x = \frac{2}{3} \quad | \quad x = -\frac{1}{2}$$

$$6x^2 - x - 2 = 0$$

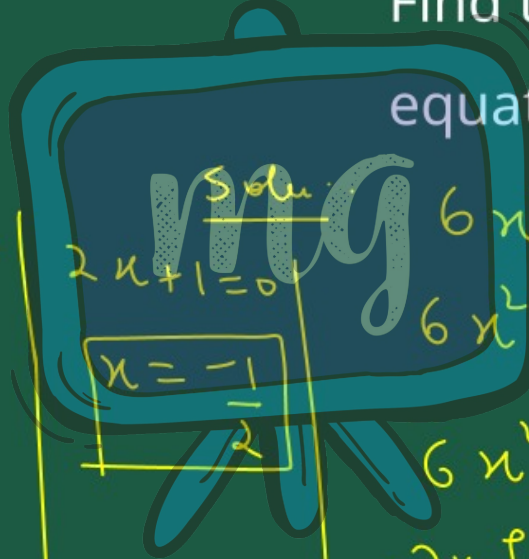

$$6x^2 - (4-3)x - 2 = 0$$

$$6x^2 - 4x + 3x - 2 = 0$$

$$2x(3x-2) + 1(3x-2) = 0$$

$$(3x-2)(2x+1) = 0$$

Example : 5

Find the roots of the quadratic equation $3x^2 - 2\sqrt{6}x + 2 = 0$.

$$\begin{array}{c} 6 \\ \swarrow \quad \searrow \\ \sqrt{6} \quad \sqrt{6} \end{array}$$

$$\sqrt{6} = \sqrt{3} \times \sqrt{2}$$

$$\begin{array}{l} \sqrt{3}x - \sqrt{2} = 0 \\ x = \frac{\sqrt{2}}{\sqrt{3}} \end{array}$$

$$\begin{array}{l} \sqrt{3}x - \sqrt{2} = 0 \\ x = \frac{\sqrt{2}}{\sqrt{3}} \end{array}$$

Solu

$$3x^2 - 2\sqrt{6}x + 2 = 0$$

$$3x^2 - \sqrt{6}x - \sqrt{6}x + 2 = 0$$

$$\sqrt{3}x[\sqrt{3}x - \sqrt{2}] - \sqrt{2}[\sqrt{3}x - \sqrt{2}] = 0$$

$$(\sqrt{3}x - \sqrt{2})(\sqrt{3}x - \sqrt{2}) = 0$$

Example : 6

Find the dimensions of the prayer hall discussed in Section 4.1.

Section 4.1

Suppose a charity trust decides to build a prayer hall having a carpet area of 300 square meters with its length one meter more than twice its breadth. What should be the length and breadth of the hall?

$$l = 2b + 1$$

$$300 = l \times b$$

$$300 = (2b + 1) b$$

$$300 = 2b^2 + b$$

$$0 = 2b^2 + b - 300$$

$$\begin{array}{|l} l \\ \hline 300 \text{ sqm} \\ \hline b \end{array}$$

$$2b^2 + b - 300 = 0$$

$$2b^2 + 25b - 24b - 300 = 0$$

$$b[2b + 25] - 12[2b + 25] = 0$$

$$(2b + 25)(b - 12) = 0$$

$$2b + 25 = 0$$

$$b = -\frac{25}{2}$$

$$b - 12 = 0$$

$$b = 12$$

$$\text{Here } l = 2b + 1$$

$$l = 2 \times 12 + 1$$

$$l = 24 + 1$$

$$l = 25$$

Therefore the length and breadth of the prayer hall are 25 m and 12 m. respectively.

LEARNING OUTCOMES

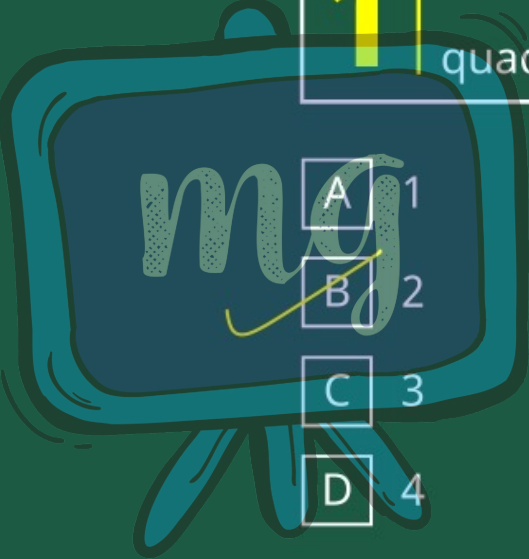

1 | Roots of Quadratic Equation

2 | Solution of a Quadratic Equation by Factorisation

ASSESSMENT

1 | The maximum number of roots for a quadratic equation is equal to :

- 
- A 1
 - B 2
 - C 3
 - D 4

ASSESSMENT

2

The roots of $100x^2 - 20x + 1 = 0$ is :

$$100x^2 - 20x + 1 = 0$$

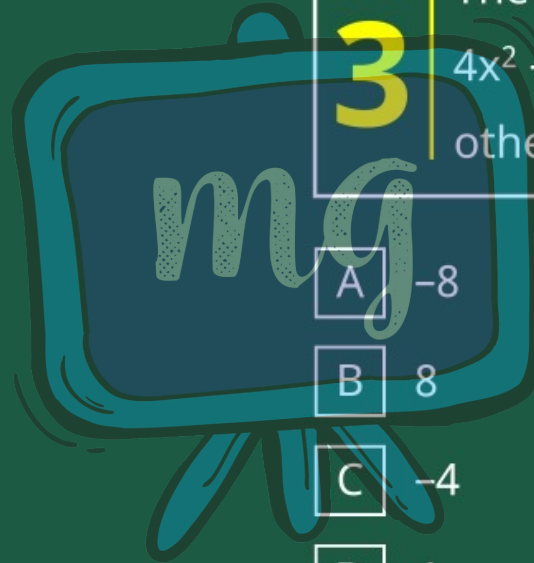

Handwritten notes: $100x^2 - 20x + 1 = 0$ with 100 under $100x^2$, -20 under $-20x$, and $+1$ under $+1$. Below the equation, there are handwritten -1 and $+1$ with a 0 below them, and a $\frac{1}{4}$ to the left.

- A $1/20$ and $1/20$
- B $1/10$ and $1/20$
- C $1/10$ and $1/10$
- D None of the above

$$100x^2 - 20x + 1 = 0$$
$$100x^2 - 20x + 1 = 0$$

Handwritten notes: $100x^2 - 20x + 1 = 0$ with 100 under $100x^2$, -20 under $-20x$, and $+1$ under $+1$. Below the equation, there are handwritten -2 and $+1$ with a 0 below them, and a 2 to the left.

ASSESSMENT

3 | The one root of equation $4x^2 - 2x + k - 4 = 0$ is reciprocal of the other. The value of k is :

- A -8
- B 8
- C -4
- D 4

ROOTS OF A QUADRATIC EQUATION

We say that $x = \alpha$ (where α is a real number) is a solution of quadratic equation $ax^2 + bx + c = 0$, $a \neq 0$, if $a(\alpha)^2 + b(\alpha) + c = 0$

 **Note**

▮ A quadratic equation has two and only two roots.

▮ A quadratic equation can not have more than two different roots.

- If α and β are the roots of $ax^2 + bx + c = 0$ then we say that $x = \alpha, \beta$ satisfies the equation $ax^2 + bx + c = 0$ or $x = \alpha, \beta$ are solution of the equation $ax^2 + bx + c = 0$.

- ▮ If α be a root of the quadratic equation $ax^2 + bx + c = 0$ then $(x - \alpha)$ is a factor of corresponding quadratic expression $ax^2 + bx + c$.

FACTORISATION METHOD

Example : 3

Find the roots of the equation

$$2x^2 - 5x + 3 = 0, \text{ by factorisation.}$$

Example : 4

Find the roots of the quadratic
equation $6x^2 - x - 2 = 0$.

Example : 5

Find the roots of the quadratic equation $3x^2 - 2\sqrt{6}x + 2 = 0$.

Example : 6

Find the dimensions of the prayer
hall discussed in Section 4.1.

Section 4.1

Suppose a charity trust decides to build a prayer hall having a carpet area of 300 square meters with its length one meter more than twice its breadth. What should be the length and breadth of the hall?
