Class 9 | Science

CHAPTER-12 | Improvement in Food Resources

QUIZ-01

1. What is the main goal of crop variety improvement?

- A. Increase shelf life of produce
- B. Increase crop yield and resistance
- C. Reduce harvest time only
- D. Reduce labour requirements (B)
- **Explanation:** Crop variety improvement aims to increase yield, quality, and resistance to biotic and abiotic factors.

2. What is hybridisation in crops?

- A. Growing crops without fertilizers
- B. Crossing genetically different plants
- C. Applying pesticides before harvest
- D. Using manure instead of fertilizers (B)
- Explanation: Hybridisation refers to crossing between genetically dissimilar plants to get desired traits.
- 3. Which of the following is a macro-nutrient for plants?
 - A. Zinc

- B. Copper
- C. Magnesium
- D. Molybdenum (C)
- **Explanation:** Magnesium is a macro-nutrient required in large quantities by plants.
- 4. Which cropping method involves growing different crops in a row pattern?
 - A. Crop rotation
- B. Intercropping
- C. Mixed cropping
- D. Organic farming (B)
- **Explanation:** In intercropping, crops are grown in a definite row pattern to maximise nutrient usage.
- 5. What is the purpose of green manure?
 - A. To kill weeds
- B. To control pests
- C. To enrich soil with nitrogen and phosphorus
- D. To increase shelf life of grains (C)
- **Explanation:** Green manure is obtained by ploughing green plants into soil to enhance nutrient content.

- 6. Which irrigation method involves storing runoff water in small reservoirs?
 - A. Canal

- B. Tube well
- C. River lift system
- D. Tank
- (D)

Explanation: Tanks intercept and store runoff from small catchment areas for irrigation.

7. What do broilers primarily provide?

A. Eggs C. Meat B. Milk

D. Wax

(C)

Explanation: Broilers are poultry birds raised specifically for meat production.

- 8. Which bee variety is most commonly used for commercial honey production?
 - A. Apis dorsata
- B. Apis cerana indica
- C. Apis mellifera
- D. Apis florae
 - oforrod

Explanation: Apis mellifera (Italian bee) is preferred for its high honey collection and low stinging tendency.

- 9. What is the main advantage of composite fish culture?
 - A. Easy to breed
- B. No water needed
- C. Efficient use of all pond zones
- D. Reduced cost of seeds
- (C)

Explanation: Different species feed in different zones of the pond, utilising resources efficiently.

- 10. What is pasturage in bee-keeping?
 - A. Type of honeycomb used
 - B. Flowers available to bees
 - C. Shape of the beehive
 - D. Sugar content in honey
- (B)

Explanation: Pasturage refers to the variety and availability of flowers which affect the quantity and taste of honey.
