

CHAPTER-4 | Psychological Disorders

QUIZ
PART-07

1. Which of the following symptoms is NOT typically associated with panic disorder?
- Intense terror
 - Palpitations
 - Hallucinations
 - Choking sensation

(C)

Explanation: Panic disorder is marked by sudden fear, palpitations, and choking sensations, but hallucinations are not typical; they are linked with psychotic disorders.

2. Which neurotransmitter is linked with depression?
- Dopamine
 - Serotonin
 - GABA
 - Acetylcholine

(B)

Explanation: Low levels of serotonin are associated with depressive symptoms.

3. The diathesis-stress model includes all of the following except:
- Biological predisposition
 - Pathogenic stressors
 - Religious beliefs
 - Vulnerability to disorder

(C)

Explanation: The model focuses on biological vulnerability and stress factors, not religious beliefs.

4. A person who refuses to eat in front of others and exercises compulsively may be suffering from:
- Bulimia Nervosa
 - Binge Eating Disorder
 - Anorexia Nervosa
 - Social Phobia

(C)

Explanation: Anorexia Nervosa involves extreme food restriction, refusal to eat, compulsive exercising, and distorted body image.

5. The ICD-10 classification system is published by:
- Indian Psychiatric Association
 - World Health Organization
 - American Psychological Association
 - UNESCO

(B)

Explanation: The International Classification of Diseases (ICD-10) is developed and maintained by the World Health Organization (WHO).

6. Which of the following is a positive symptom of schizophrenia?
- Avolition
 - Catatonia
 - Hallucinations
 - Flat affect

(C)

Explanation: Positive symptoms include hallucinations, delusions, and disorganized speech; negative symptoms include flat affect and avolition.

7. A child with difficulty in initiating conversations, repetitive movements, and lack of social interaction likely has:
- Intellectual Disability
 - ADHD
 - Autism Spectrum Disorder
 - Conduct Disorder

(C)

Explanation: Autism Spectrum Disorder is characterized by deficits in social communication and repetitive behaviors.

8. Which of these disorders is characterized by irrational fear of specific objects or situations?
- Generalized Anxiety Disorder
 - Phobia
 - Panic Disorder
 - Obsessive-Compulsive Disorder

(B)

Explanation: Phobias are anxiety disorders marked by irrational and persistent fear of particular objects or situations.

9. The creation of new words or phrases in schizophrenia is called:
- Perseveration
 - Hallucination
 - Neologism
 - Delusion

(C)

Explanation: Neologism refers to inventing new, meaningless words often observed in schizophrenia patients.

10. Conduct disorder involves all of the following EXCEPT:
- Aggression
 - Academic excellence
 - Property damage
 - Serious rule violations

(B)

Explanation: Conduct Disorder is defined by aggression, property destruction, and rule violations, but not academic excellence.
